

We have further worked on making our website HANS, which stands for Household And Necessity Store more convenient and user friendly for the people living in remote areas.

As we all know , It's very complicated for them to provide login details due to their weak educational background. In order to overcome this problem, we devised an idea that people in every area have their respective house numbers allotted by the Municipal Corporation or the Village panchayat. So, instead of struggling with complex login details which comprises of creating username, password, address and so on ... They just need to enter or select their house number in their respective areas to access to our HANS FMCG store.

- After searching their area they will be guided to enter or select their house number.
- When they select the house number, they would access to our FMCG store.
- Here we have kept clear and HD images of the products such that flour and Rice could be easily differentiated and they won't be struggling with the product names. This was all about recent updates, for checkpoint 2

- The easy usage of our website can be seen here.
- On the top right corner , there's a Box for searching the area. After this we can either look for our house number from menu or directly search from here.
- Entering invalid house numbers will display nothing.
- We have already tried to make the website very handy. Still if any users face problems we hope to solve them through our query section.
- For easier shopping, we have provided clear and distinct images of each product in our shopping section.
- Contact number shown here can help people reach us directly from this page ensuring is in delivery.
- Amazon, Flipkart, Grofers and Big Basket are available in developed cities but not in remote areas. If some are available in remote areas, they does not provide groceries or FMCG products.

This way our service will not only help them to deal with this pandemic but also be beneficial for there regular days.
